

# Z-Linker Technology

FOR UNMATCHED ACCURACY AND PRODUCTIVITY

**CONSISTENCY IN QUALITY,  
EXACTNESS IN QUANTITY.  
NOTHING MEASURES UP,**

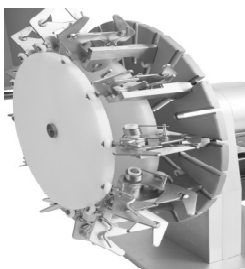

Nitta Casings is a company comprised of highly qualified and experienced people dedicated to increasing your productivity. This is accomplished by combining collagen casing technology with linking technology developed exclusively by Nitta Casings.

The Z-Linker has become the preferred fresh sausage linker in North America because of its high efficiency, versatility, and low maintenance. And, only Nitta Casings brings you 30 years of hands-on experience.

Linking Head Sub-Assembly

The linking Head Sub-Assembly is a device used to form and cut an individual sausage link from a continuous stuffed sausage casing.

Cams (white discs)

Rollers on the Linking Head Sub-Assemblies ride on Cams. Cams control the scissor action in guiding, forming, and cutting the sausage to link size.

## High Efficiency

The innovative Z-Linker utilizes self sharpening cutting blades that rotate on a fixed cam to form and cut uniform links. The efficient cutting action is less demanding on the casing, thus lowering rework and increasing casing utilization. The stainless steel blades are fixed to the disc to ensure precise and uniform link lengths.

## Broad Versatility

Altering link lengths is easily accomplished by making a quick and simple change of cams. Cams are available to make links as small as 3 1/2" and as large as 6". No adjustments are needed to change diameters.

## Low Maintenance

The Z-Linker requires little maintenance and repair. The long lasting, self-sharpening, precision stainless steel linking heads are easy to adjust and replace. Daily cleaning, sanitizing and oiling takes only a few minutes.
